                                                                                                                       transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DCR3 modulates its effects (By similarity).

SUBCELLULAR LOCATION: Type II membrane protein and secreted 'Businilarity'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    μ
                                          PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).

"Ital Tensor of Cytokine that binds to TNFRSF6/FAS, a receptor that transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development.

"NNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DcR3

May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DcR3 modulates its effects (By similarity).

May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DCR3 modulates its effects (By similarity).

-i- SUBUNIT: HOMOTRIMER (PROBABLE).

-i- SUBCELLULAR LOCATION: Type II membrane protein (isoform FASL);

                                                                                                                                                                                                                                              . Immunol. 38:581-586(2002).

FUNCTION: Cytokine that binds to TNFRSF6/FAS, a receptor that transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DcR3 modulates its effects (By Similarity).

SUBQUIT: Homotrimer (Probable).

                                                     VIFOLOGY 202:586-605(1994).

1: FUNCTION: IE-N AUTOREGULATES ITS OWN EXPRESSION AND STIMULATES BOTH IE-1 AND IE-0 IN TRANSIENT ASSAYS. THE STIMULATION OF IE-: EXPRESSION MAY ACCOUNT FOR THE AUGMENTING ACTIVITY OF IE-N IN IE-1 MEDIATED TRANS-ACTIVATION OF THE 39K PROMOTER.

1: SIMILARITY: TO OPMINY IMMEDIATE-EARLY PROTEIN IE-2.

-:- SIMILARITY: CONTAINS 1 RING-TYPE ZINC FINGER.
